Dice Log: roll your own seed

SeedSigner dice mode · 24 words from 99 rolls (SHA-256) · Self-Experiment 1b

⚠ **This string of digits IS the seed.** Anyone who knows the 99 numbers can recompute the 24 words. Never photograph it, never scan it, never type it into anything digital, not even to recompute it. Once the words are in steel, destroy this sheet or store it like the backup itself.

⚠ **For self-experiments:** A documented seed counts as compromised and is never used for real coins.

METHOD (SHORT VERSION, SAME THROWING TECHNIQUE AS SHEET 1A)

You need: 5 casino dice · dice cup with lid · pen · SeedSigner (dice mode, 24 words = 99 rolls). No coin, no word table.

1. Throw all 5 dice together. **Every number from 1 to 6 counts**, and there are no rerolls on 5/6 here.
2. Fix a reading convention beforehand and keep to it: left to right, as the dice lie (top to bottom if in doubt). Do not sort them, do not move them.
3. Boot the SeedSigner, **then pull the microSD** (it runs from RAM, the device says so itself). Write the 5 digits into the row and enter them on the device right away.
4. 19 rounds with 5 dice, round 20 with 4 dice = **99 digits**. The SeedSigner then shows the 24 words.

1	2	3	4	5	= 5 digits per round · round 20 only 4 dice

Round	D1	D2	D3	D4	D5	Digits
1						5
2						10
3						15
4						20
5						25
6						30
7						35
8						40
9						45
10						50

Round	D1	D2	D3	D4	D5	Digits
11						55
12						60
13						65
14						70
15						75
16						80
17						85
18						90
19						95
20					×	99

The 24 words appear on the SeedSigner after the 99th digit. **They do NOT go on this sheet** but onto a separate note and from there into steel (chapter 5). A backup card is at most a paper copy. The digits on this sheet alone are already the whole seed.

NOTES / FAILED ATTEMPTS (FOR THE LOGBOOK)

VERIFICATION: FIRST THE METHOD, THEN THE BACKUP

- ☐ **Beforehand, with a throwaway seed:** recompute the method following the Dice Check guide (`dice-check.html` or `verify_dice_seed.py`, offline). If all 24 words match, the procedure is established.
- ☐ **With the real seed** type the digits in nowhere. Choose "Verify" on the device. It quizzes all 24 words and so checks your note.
- ☐ Words transferred into steel (no photo, no text file), fingerprint check from the steel. Destroy the note or keep it as a paper copy in a second place.
- ☐ This sheet destroyed or from now on stored like the backup itself.
